# CONTROL PANELS

Our company ADDLER has designed fully automatic change over units to provide reliable uninterrupted supply of gas other medical facility or network of health care units. Control panel connecting with two manifolds from left bank and right bank of cylinders with option of gas specific copper tailpipe for connecting compressed gas cylinders to manifold through HP non-return valve to form a gas bank. Change over units with choice of automatic and semi-automatic bank switching facility.

Analoge-Automatic Change-Over Unit

Digital-Automatic Change-Over Unit

Semi-Automatic Panel

Auto Changeover LMO/PSA

# ALARM SYSTEM

**Tycoon-** is a digital microprocessor based alarm systems and sensing is done through highly sensitive transducer. Tycoon has been designed for integration with the master alarm of central information systems which have 16 zone display facility. External power adapter that accepts 240 V ac as the in input voltage and delivery output voltage of 12DC, required only fir visual and auditory signals.

**Magnate-** is an analog alarm systems and sensing is done through highly pressure switch. Magnate has been designed offer two auto alarm to monitor status of central medical gas supply and vacuum systems and trigger dual alarm. Its signal to user with an auditory and visual alert of medical gas pipeline systems.

# MEDICAL GAS OUTLETS

BS - Co<sub>2</sub> & AGSS Outlet

DISS - Co<sub>2</sub> & AGSS Outlet

BS Standard Gas Outlet

Puritan-Bennett Gas Outlet

Fusion Gas Outlet

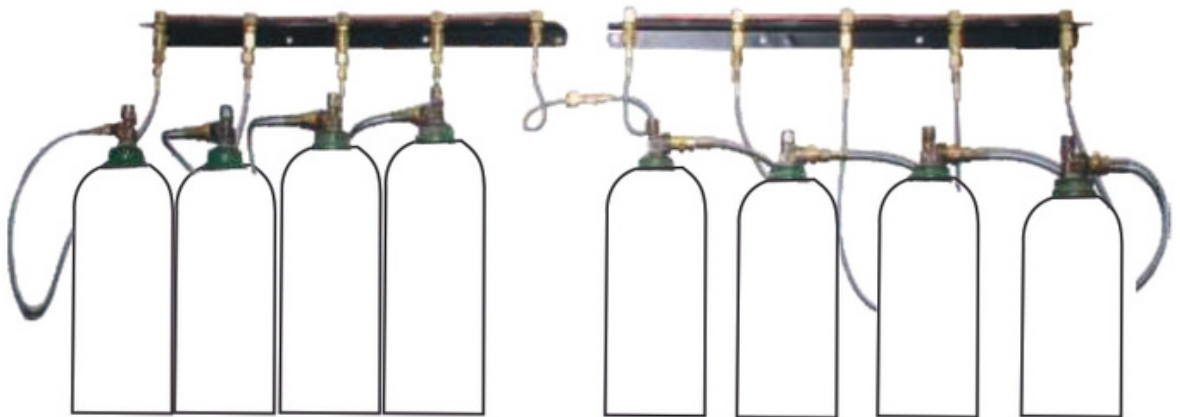

Parkodex Gas Outlet

## AREA ZONAL VALVE BOX

Zone valve box (AVSU) assembly consists of a steel valve box that can house two to six shut-off ball valves with tube extensions, an aluminium frame, and a pull-out removable opaque or clear window. Up to six valves can be configured within a single rough-in box, reducing installation time. The area zonal service unit are fitted to all medical gas and vacuum services in a prominent and accessible position at the entry to wards, theatres, intensive care, recovery rooms etc. the ASVU contains in metal box shut off valves, pressure gauge. Shut off valve are provided to isolate a section area or zone of hospital to avoid supply interruption to entire establishment in case of emergency, maintenance, repair, periodic testing and planned future expansion We are offered in single gas to six gases type with feature a pull- out removable opaque window.

# AIR COMPRESSOR & VACCUM PUMP

Anest Iwata was the first in the world to develop air-cooled, oil less scroll compressors. Now we have taken our patented scroll technology and incorporated it into our premium line of SL series oil free scroll compressors. The line consists of Base-Mount, Open-Type and Enclosed-Type.

# GOLDEN NIMBUS INDIA PVT LTD

The Medical Gas Pipeline System is a key element of every hospital. The MGPS provides vital medical gases for patient ventilation and various clinical applications. Installing a reliable central medical gas supply involves a great deal of responsibility, which we are happy to take on for you – with specialist knowledge, outstanding systems expertise, and a comprehensive range of after-sales services. We make sure that medical gases and vacuum are always supplied to patients in the prescribed quality and at the right pressure –around the clock, 365 days a year. We plan, install and maintain systems that are not only reliable and perfectly customized to your needs, but that also meet the highest quality and safety standards.

The Gas Management System is the beginning of a supply chain whose last link is the patient and provides vital medical gases. This involves a great deal of responsibility, which we are happy to take on for you with specialist knowledge, outstanding system expertise, and a comprehensive range of services. ADDLER Gas Management is made up of many different components that all smoothly interconnect to ensure that compressed air, oxygen, and other medical gases as well as vacuum are permanently available in every department.

We believe ventilation safety of patients during treatment in hospital is of vital importance and we ensure that each patient and a new-born baby which receives oxygen through the nose, every breath is monitored. The same applies when a coma patient is artificially ventilated or a patient is anaesthetized for an operation. In all such cases, the health and life of the person being treated depends on reliably functioning ventilation and anaesthesia machines as well as a safe and constant supply of medical gases.
